Art Unit: 1615

The finality of the rejection of the last office action and indicated allowability of claims 1-13, 19 and 20 is withdrawn in view of the following new grounds of rejection.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-13 19 and 20 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The factors to be considered in determining whether a disclosure meets the enablement requirement of 35 U.S.C. 112, first paragraph have been described in In re Wands, 8 USPQ2d 1400 (Fed. Cir. 1988). Among these factors are: (1) the nature of the invention; (2) the state of the prior art; (3) the relative skill of those in the art; (4) the predictability or unpredictability of the art; (5) the breadth of the claims; (6) the amount of direction or guidance presented; (7) the presence or absence of working examples; (8) the quantity of experimentation necessary. When the above factors are weighed, it is the examiners's position that the instant

Art Unit: 1615

disclosure fails to meet the enablement requirement for the following reasons: (1). The claims are to a process for preparing a tablet requiring the application of energy for a sufficient time to change the properties of the tablet, which in this instance decreases hardness. (2). The prior art did not show heating to reduce hardness (experimentation was required) but modifies properties by changing excipients and atmospheric conditions such as humidity. (3). The relative skill of those in the art is high. (4). The unpredictability of the art is very high. Applicants' specification suggests that while energy being applied to the tablet releases water the tablet becomes softened. This seems in contrast to what the examiner understands to be known in the art and that is normally one would expect the tablet to harden. It is noted that applicants' discussion states the resultant softening to be a theoretical explanantion. (5). The claims are rather broad, in particular with respect to the application of energy. (6). In describing the application of energy, applicants disclose heat or electromagnetic radiation, such as microwaves. While heating may be performed at a temperature generally in the range of ambient temperature to 100 degrees C, no other description of energy application is described in detail. (7). All

the examples relate to heating wherein the amount of heat applied is in degrees

Application/Control Number: 09/752,601

Page 4

Art Unit: 1615

centigrade. (8). The quantity of experimentation necessary is extensive for determining other forms and means for applying energy. While electromagnetic radiation such as microwaves is disclosed there is no guidance for determining the amount or intensity of such energy. Nor is there guidance in equating heat in degrees centigrade to microwaves over the required periods of time. The disclosure of a single species of energy, which in this instance is heat does not provide a basis for claiming the generic concept of energy. The claims are therefore not commensurate in scope with the disclosure.

Claims 1-13, 19 and 20 are rejected.

Claims 14-18 and 21-23 have been canceled.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James M. Spear whose telephone number is 703 308 2457. The examiner can normally be reached on Monday thru Friday from 6:30 AM to 3 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman Page, can be reached on (703) 308 2927. The fax
